

## SWINGING CRADLE TRAILERS

Thank you for your enquiry about a new trailer for your Drascombe Dabber.

The trailer we offer is the new generation of trailer based upon a swinging cradle at the aft end of the trailer. They have been so successful under the larger Drascombes that we thought Dabber owners ought to be able to share the benefits.

This arrangement makes single-handed recovery a normal routine. There is no risk of the boat moving off line and graunching off the rollers. The wheel bearings can always be kept dry. The trauma of recovery becomes a thing of the past & the rate of bearing failure hugely reduced. The trailer frame is fully hot dipped galvanised & is fitted with top quality suspension units and tows like a dream. It complies with the National Small Series Type Approval regulations within the new European Regulations and comes with a manufacturer's guarantee of one year. The bearings are waterproof & sealed for life, guaranteed by the axle manufacturer for 5 years. If you purchase one of these trailers, you will derive pleasure from having made the right decision every time you recover your boat.

The cost of a trailer for a Dabber is £1,500.00, ex Yard at Andover. It includes a winch & jockey wheel & a full width lighting board on extenders (no more lash-ups onto the transom at strange angles). A spare wheel is an extra £53.55.

With any trailer purchase, the other accessory you should consider purchasing at the same time is a pair of Spansets, one for the primary tie down across the gunwhales, the other to secure the bow. They are more secure than rope tie-downs and a lot kinder to your boat. It takes very little time to set them up and they are a joy to use. The cost is £47.64 for the primary one & £20.68 for the bow set. Well worth the money.
